

Reports Overview

Overview

EnergyCAP includes more than 350 reports to help visualize and analyze data from utility bills, setup information, interval and weather data, and even advanced tools like Cost Avoidance. Most reports can be filtered by 30 or more application values to easily narrow down the scope of information to only what is important to a users' specific need. Every user can filter their own version of any report without affecting other users. Every report can be printed, exported to a PDF file and in cases of tabular data, exported to Excel for easy sharing and further analysis.

Every report that is installed provides a sample image of what the report will look like as well as a brief description. This allows users to quickly scan many reports to find the best fit for their need. As reports are run, they are automatically added to the convenient **My Recent Reports** list so that the reports used most often are easy to find.

EnergyCAP Report Library

A more detailed overview of reports, including descriptions, filters, and images is available in the EnergyCAP [Report Library](#).
